SIMULATED LIVE ANIMAL FOR SURGICAL

I. BARIATRIC METABOLIC SURGERY COURSE

Overview & Objectives

This course is designed for surgeons who want to adopt bariatric metabolic surgery to their practice. Participants will increase their procedural knowledge and skills to perform laparoscopic bariatric and metabolic surgeries. The theoretical part includes didactic and video lectures focusing on the preoperative preparation, operative steps of key procedures in bariatric surgery and postoperative nutrition. Safe stapling strategies also one of the purposes of the course.

The hands-on training part o of the course will provide further opportunities to refine skills to perform safe and successful bariatric procedures such as sleeve and gastric bypasses using meticulous dissection and anastomosis techniques.

II. LAPAROSCOPIC COLORECTAL SURGERY COURSE

Overview & Objectives

This pre-congress course is designed for surgeons who want to adopt a fully laparoscopic approach in their colorectal cancer practice. Participants will increase their procedural knowledge and skills to perform laparoscopic colorectal surgeries. The theoretical part includes didactic and video lectures focusing on the key operative steps and techniques necessary to perform laparoscopic colorectal procedures efficiently. The hands-on training part of the course will provide further opportunities to refine skills to perform safe and successful colorectal procedures. At the end of the course, each attendee will be able to:

- Decide to perform laparoscopic colorectal surgery
- Describe the indications, patient selection, patient information, risks, and complications related to laparoscopic colorectal surgery
- Outline the important anatomical considerations for safe laparoscopic colectomy (vascular isolations, embryological plans, etc.)
- Be familiar with technological innovations related to dissection, visualization, and perfusion
